...

<div>LEMON FINO</div> <div></div> <div><p>Very large and vigorous tree. Medium-sized fruit, richer in juice than the Verna variety.</p><p>High quality for fresh consumption and for the industry.</p></div>	<div>LEMON VERNA</div> <div></div> <div><p>Vigorous tree with some small thorns.</p><p>Fruits in summer, when lemons are rare in European markets.</p></div>
--	---

ORANGES

<div>ORANGE NAVEL LATE</div> <div></div> <div><p>Medium size and elongated shape.</p><p>Because of its quality, it is mainly intended for selective markets with high prices.</p></div>	<div>ORANGE NAVELINA</div> <div></div> <div><p>Large size. Round or slightly oval shape. Seedless.</p><p>The most cold-hardy orange variety.</p></div>
<div>ORANGEA LANE LATE</div> <div></div> <div><p>With the navel hardly visible on the outside. Sweet and pleasant taste. Low limonine content.</p><p>Good and consistent productivity.</p></div>	<div>ORANGE NAVEL POWELL</div> <div></div> <div><p>Large, vigorous tree. Fruit is large and of excellent quality. Seedless. Orange colour. Fruit shape is round.</p></div>

ORANGES

ORANGE CARA CARA

Orange with red flesh of medium size. It is distinguished by its reddish interior colour.

It has a high sugar content and a very juicy flesh.

ORANGE MIDKNIGHT

Mutation of Valenica Late from South Africa. Vigorous, thornless tree.

Suitable for both fresh consumption and industrial use.

ORANGE AMARGA

Bitter taste with a more persistent sweetness similar to liquorice.

The most widely grown in the Mediterranean is the Naranjo from Sevilla.

ORANGE NEW HALL

This fruit is distinguished by its low acidity, as well as a very sweet and savoury flavour.

Sweet and juicy.

ORANGES

ORANGE VALENCIA LATE

It belongs to the white orange group. Medium to large size.

Suitable for both table use and juice.

ORANGE SALUSTIANA

Medium size. Flattened round shape. Seedless. Very juicy flesh and abundant juice.

Perfect for fresh eating and juicing.

ORANGE SANGUINELLI

Mutation of the double orange fine. The colour of the segment varies in intensity depending on the piece, but it is not usually red in colour throughout.

CLEMENTINES TANGERINS

CLEMENTINE ORONULES

The fruit is slightly larger than that of the Oronules and more uniform. Attractive, intense reddish orange colour. Good juice content with a pleasant taste.

CLEMENTINE HERNANDINAS

Slightly flattened shape. The skin is a deep orange colour, thin and easy to peel.

CLEMENTINE CLEMENULES

Good size fruit with a high juice content. It can be grown in almost all our production areas.

CLEMENTINE ESVAL

Medium-sized, flattened fruit with a deep orange rind. Very good quality flesh.

CLEMENTINES TANGERINS

CLEMENTINE SANDO

Vigorous, thornless tree. High pollen viability. Very attractive appearance. Fruit detaches at low temperatures.

CLEMENTINE ARRUFATINAS

Tree of medium vigour with a slightly flattened shape. Productive variety with good fruit size and rapid entry into production.

CLEMENTINE CLEMENRUBI

Mutation of Oronules. Slightly larger size and very similar characteristics.

MANDARINA MURCOTT

Medium size and typical mandarin shape. High quality late mandarin. Balanced acidity level.

CLEMENTINES MANDARINS

MANDARIN NADORCOTT

Keeps well on the tree until April.

Excellent bright reddish-orange colour; good juice content and easy peeling.

MANDARIN CLEMVILLA

The fruit is of good size and has a high juice content and excellent flavour. No seeds.

Intense reddish orange colour.

MANDARIN ORTANIQUE

This mandarin tree has an open habit, very long shoots with few branches.

It has no thorns on the thick branches, but on the thin branches.

MANDARIN ELENDALE

Hybrid of mandarin and sweet orange. Medium to large in size and normally flattened.

Smooth textured skin with good deep orange colour.

CLEMENTINES MANDARINS

MANDARIN ORRI

The fruit is of high quality, with a very high sugar content.

The flesh is orange in colour, with a fine, melting texture.

MANDARIN GOLD NUGGET

When the tree is young, the skin is very wrinkled. Completely seedless.

The ratio between sugar content and acidity is perfect.

MANDARIN TANGO

Irradiation-induced mutation of a W. Murcott mandarin graft.

Produces unviable pollen, always grows without seeds.

MANDARIN TANGO GOLD

Irradiation-induced mutation of a W. Murcott mandarin graft.

Unlike Tango, this mandarin contains seeds

GRAPEFRUITS

• • •

GRAPEFRUIT STAR RUBY

Tree of medium vigour and without thorns. Fruits are yellow on the outside. Good size. Almost red flesh. Low pollen viability, very good quality variety.

GRAPEFRUIT RED RUBY

This variety has good internal quality and good shell pigmentation. In general, it also has very few seeds.

STONE FRUITS

Peaches, paraguayos, nectarines, apricots

PEACHES

YELLOW PEACH

The skin is yellow with slight pink or orange tones. They are larger than other peach varieties.

WHITE PEACH

Pêche à chair blanche. C'est une variété sucrée avec une touche croquante.

Elle est très aromatique, avec une peau fine et lisse.

AMANDINE PEACH

Couleur rouge foncé. Parfaitement rond, sans pointe.

Arbre vigoureux, semi-ouvert.

FLAT
PEACHES

PARAGUAYO

YELLOW PARAGUAYO

WHITE PARAGUAYO

A variant of the peach with a reddish, fluffed skin and a flattened shape.

All varieties have a very sweet taste.

NECTARINES

...

YELLOW NECTARINE

They have a red or yellowish flesh and a very characteristic sweet taste.

Crunchy texture, thin and attractive skin and good consistency.

WHITE NECTARINE

The skin is not smooth like that of the plum and can be eaten peeled or not.

The flesh is white and the taste is sweet but slightly acidic.

FLAT NECTARINES

• • •

YELLOW PLATERINE

Very similar in size and shape to the paraguaya, it looks like a flat nectarine, with a shape that may remind one of a doughnut or button. It has a thin, smooth skin

WHITE PLATERINE

Very similar in size and shape to the paraguaya, it looks like a flat nectarine, with a shape that may remind one of a doughnut or button. It has a thin, smooth skin

APRICOTS

APRICOT MOGADOR

Early varieties of French type. Round or oval shape.

Orange in colour with a red patch. Good flavour.

APRICOT COLORADO

Like the Mogador. Round or oval shape.

Orange in colour with a red plate. Good taste

APRICOT RAMBO

Apricot early. Round, oval shape. Good firmness. Vigorous tree.

APRICOT FLOPRIA

Early apricot. Round, oval varieties.

Like the Mogador and Colorado, with a round or oval shape but can be larger in size.

APRICOTS

...

APRICOT PRIMASSI

Round to elliptical shape. Orange background colour with some red overlay on exposed fruit.

SIERRA DE CARRASCOY

OTHERS

Grapes, almonds, strawberries

GRAPES

WHITE GRAPE

The vine is a climbing plant with deep roots, which can spread freely up to 30 metres and whose fruit are berries (grapes).

AUTUMN ROYAL GRAPE

Black seedless variety. The berries have a purple to black colour.

The size of the berries is one of the largest of the seedless varieties.

ALEDO GRAPE

Table grape typically grown in the Vinalopó Valley.

A very resistant variety due to its thicker skin and late harvest.

BLACK GRAPE

It needs a warm climate to grow well.

Grapes are thought to have been the first fruit cultivated by man.

GRAPES

ITALIA GRAPE

The colour of the skin is green-yellow with an elliptical profile shape and relatively easy separation from the pedicel. The thickness of the skin is medium.

RED GLOBE GRAPE

The Red Globe grape is known for its large bunches and large berries. This variety bears seeds and has a sweet and appetizing taste.

ITUM 9 GRAPE

Black seedless grape with a very crunchy texture and a neutral-acidic flavour.

The berries are black-purple and oval in shape.

ALMONDS

ALMOND ANTOÑETA

Hard shell, with a strength of 35%.

The inner fruit or seed is usually heart-shaped.

ALMOND PENTA

Balanced growth habit and good disease tolerance.

It is another very late lowering variety but with very good production.

ALMOND AVIJOR

It is a well-proven almond tree under different conditions with excellent results.

It is especially significant is its resistance to ochre blotch.

STRAWBERRYS

STRAWBERRY PRIMORIS

Short day variety with excellent flavour.

The high firmness of the fruit makes this variety ideal for export.

STRAWBERRY LEYRE

Short day cultivation suitable for winter production regions.

Its open plant structure allows easy access to the fruit, which facilitates harvesting.

STRAWBERRY FORTUNA

It is a short-day variety, very well adapted to the climate of Huelva.

Medium to large size, conical. The fruit is firm but always juicy.

STRAWBERRY CALINDA

The calinda fruit is beautiful and uniform, bright deep red in colour.

It is very juicy and has an excellent taste and texture.

STRAWBERRYS

STRAWBERRY VICTORY

Victory, early and very productive, is characterised by its unequalled post-harvest life, which makes it a very safe variety for marketing.

STRAWBERRY ROCIERA

It is unanimously considered to be very complete from all points of view.

It is a short-day variety with high resistance.

STRAWBERRY LETICIA

Bright red fruits, uniformly coloured, with a shiny surface. Shiny with a slight violet-cherry tinge.

The berries are oval-conical in shape.

STRAWBERRY GIOELITA

It is characterised by entering into production in mid-January, reaching its highest volumes at the beginning of March.

Very hard fruit, excellent for transport.
